Press Release

DuoShare Earns LACS^{Link}™ Certification and License Approval

Dallas, Texas, August 11, 2005: DuoShare, Inc., creator of the first J2EE™ CASS Certified™ postal address matching service, has been approved by the United States Postal Service® as a certified LACS^{Link} Licensee as of April, 2005. The LACS^{Link} Data Product, which stands for the Locatable Address Conversion System, was developed by the USPS® to provide mailers with an automated method for obtaining new addresses created as a result of 911 emergency system implementations. Most 911 address conversions involve changing rural-style addresses into city-style addresses, but conversions may also involve renaming or renumbering existing city-style addresses.

The license permits the DuoShare PostalSM application to access LACS encrypted data and provide new converted addresses when customers process their address lists using DuoShare Address Quality ServicesSM. Stephen Buck, Vice President of DuoShare, is pleased with this addition to DuoShare's value-added services. "While most vendors offer each type of address quality component separately and at additional prices, DuoShare leads the pack by understanding that a bad address is simply a bad address. Customers have a right to a complete address quality solution and should not be sold a partial solution. We are excited to once again add the next level of capability to our service without increasing our prices."

DuoShare Address Quality Services are offered under industry first Value-Added PricingSM, with no minimum charge, no contract, and no long-term commitment. For more information, call DuoShare or visit the website at <http://duoshare.com>.

DuoShare, Inc. is a privately held software services company based in Dallas, Texas, founded in 2001 to create specific business processes and services and deliver those via the Internet. DuoShare Postal is a small portion of a larger software application offering companies the flexibility to integrate key business functions in a vendor-neutral environment and at a reduced cost.
